SUSTAINABLE HOUSING SOLUTIONS

SOLUTIONS

“

I see Envirohaven being revolutionary for the sustainable housing market. Finally, a company is providing an affordable way for people with any kind of budget to live an eco-friendly lifestyle and to not be dependent on public utilities to power their homes. Envirohaven will change the way people think about building in rural and remote locations.

Dave Archer, President and CEO of NCET

”

MISSION STATEMENT.

Envirohaven will continually strive to integrate sustainable building technologies and harvest renewable energy in adaptive ways to make the prospect of living independent of public utilities obtainable and desirable.

INTEGRATED SUSTAINABILITY.

Envirohaven is revolutionizing the remote housing industry with our panelized home package that contains all mechanical elements necessary for living without the need to access public utilities. Our patent pending design minimizes the size of any energy generation system used by maximizing energy efficiency. The homes are cost effective and simple to construct, while at the same time they provide a comfortable and spacious 21st Century lifestyle.

THE ENVIROHAVEN STORY.

We live in a world of ever increasing energy demands and shrinking resources causing world strife. Do you need or desire shelter in an area that doesn't have access to a power line?

General Contractor Greg Bischoff, has been researching, designing, and building custom energy efficient homes since 1978. The Haven design was Greg's vision for addressing the increasing need for simple, cost-effective and energy-efficient home packages specific to the needs living without access to public utilities or, "off-grid housing".

Never before have so many energy-saving and sustainable features been combined in one home design that is strong and durable, simple to construct, yet affordable. Our simple structural design solves extremely complex problems for people who are required or desire to live without access to public utilities.

The Haven patent pending home package transforms the challenge of off-grid home construction into an American dream. Our unassembled 1400 sf. home package is easily assembled anywhere and can cost under \$85 per square foot including all energy generation, and life support needs. Although able to withstand the harshest environmental conditions, our design is lighter weight than conventional pre-fab homes to reduce shipping costs.

Our company Envirohaven has grown out of generous support from the Nevada Center for Entrepreneurship and Technology (NCET), established professional relationships and networking resources within the entrepreneurship program at the University of Nevada Reno (UNR), mentors from within the Small Business Development Agency (SBDA), and the greater Reno-Tahoe Construction Industry community.

OUR PROMISE.

Envirohaven offers a 10-year limited warranty for factory parts and labor. We support all manufacturers' warranties on all LIFE SYSTEM products. We exceed customer expectations with regard to their service needs and overall experience.

ADAPTABLE.

Our standard model is 3brm-2 bath, but the fully adaptable 1400 sq. ft. design can be customized to suit our client's needs. Options range from an open lodge with commercial kitchen, to a 4 brm-3 bath dormitory with kitchenette accommodating up to 8 individuals.

PORTABLE.

If the situation requires the home to be moved, our home can be broken down and be built in an alternate location with minimal construction costs.

FLEXIBLE.

Although solar power and solar thermal come as standard equipment in our package, our homes can be customized to use a combination of any renewable and non-renewable energy generation systems. A wide range of energy harvesting systems can be adapted for specific site and homeowner requirements

SOLID.

Haven homes have been designed for high R-values in the walls and roof and can withstand the harshest environmental conditions such as gale force winds, earthquakes and heavy snow loads; making them ideal for remote locations.

WE'RE WITH YOU EVERY STEP OF THE WAY.

A variety of options are available through Envirohaven to ensure that your new home meets all of your budgetary, environmental, and living requirements.

Haven Home Options:

- Basic Package Only
- Basic Package Assembled, by a licensed general contractor in your area
- Turn-Key Home; complete with all interior materials and finishes. Design assistance available. Assembled by a licensed general contractor in your area.

Additional Services include:

- Training programs for homeowners and contractors at our Reno Facility as well as on site.
- Customized home design and floor plans
- Building site optimization consultation
- Site Contractor support

- System monitoring and service packages are available upon request.

Envirohaven is a manufacturing company that produces complete home packages to be assembled by others.

We highly recommend using licensed contractors, plumbers and electricians when constructing our home packages. Contractor inquiries are welcome.

We seek to encourage economic development in the areas our homes are built by supporting local contractors, tradesmen and vendors.

Site support, detailed construction manuals, videos, and remote electronic assembly assistance are provided for all Envirohaven customers in the Western United States for no additional fees.
